Equitech Establishes Worldwide OEM Sales Program

Mullica Hill, NJ, September 7, 2021

Equitech Int'l Corporation (stock exchange ticker EQTL), a manufacturer of opto-electronic solutions for process management, announced the establishment of a **Worldwide OEM Sales Program** which allows the manufacturers of extruders, feeders, and other processing equipment to work with Equitech on the integration of Equitech's technology into their control and process management technologies.

"At this time, Equitech is ready to provide OEMs with engineering support in the USA, Europe, Korea, and Taiwan by engineers with many years of industrial experience and graduate degrees in optical engineering, analytical chemistry, polymer science, statistics, electrical and chemical engineering" said Dr. Joseph Golba, Equitech's Vice President of Innovation and Implementation. "Equitech will add engineering support to other Asian countries soon", added Golba.

Equitech recently purchased CompSOL USA, a 20-year-old company that designs engineering devices for consumer and industrial markets. "Equitech has now diversified its product line and increased its revenue stream" commented Majid Babaie, Equitech's Chief Operating Officer.

Equitech is the inventor and developer of the EquiSpec™, an in-line UV-Vis Spectrophotometer (IPS), and a myriad of fiber optic probes such as the Reflection Polymer Melt Probe (RPMP) and the Transmission Polymer Melt Probe (TPMP) useful in polymer extrusion operations. These as well as other specialized probes allow the measurement of color and chemical composition in molten polymers, liquids, and gases as well as slurries, pastes, and solids.
